

INTRODUCING THE  
NEWEST INNOVATION IN  
SURFACE & AIR DISINFECTION.

# COVIDINATOR™

DISINFECTION TECHNOLOGY DESIGNED FOR SAFETY

OFFERED EXCLUSIVELY THROUGH

# A BETTER CHOICE FOR DISINFECTION

Creating a cleaner, healthier and virus free environment is more important than ever. The Covidinator™ plasma disinfection technology has been shown to eliminate 100% of pathogens, including those more difficult to kill than the coronavirus. With faster clean times, our lightweight, portable units can disinfect your space in half the time of other technologies.

**Effective | Easy to Use | Lab Tested**

## HOW IT WORKS»

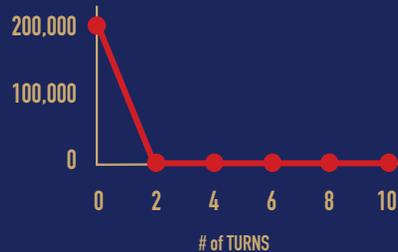

APJeT®'s plasma disinfection systems use a patent-pending air plasma technology that interacts with and breaks down the components in the air.

When these atoms recombine with the moisture in air, they create what are known as 'reactive species', that destroy viruses, bacteria and fungi.

**Kills ALL Pathogens & COVID-19'**

## COVIDINATOR™ DISINFECTION (Outside Test Lab)

100,000+ pathogens were eliminated from air after two passes through the COVIDINATOR™. A typical aviation interior cabin is disinfected in 90 minutes.

## EFFICIENCY

APJeT® systems achieve the highest kill rates amongst all other methods of disinfection. With no chemicals and minimal energy required, the Covidinator™ provides users with a safer and more energy efficient option for elimination of contaminants.

Our surface disinfection technology achieves 100% elimination of an approved COVID-19 surrogate after 90 seconds of exposure.

In one pass of room-circulated air, the Covidinator™ achieves a 'total kill' of bacteria, including Staphylococcus Epidermidis, a surrogate bacteria for the deadly MRSA bacteria.<sup>1</sup>

## VALUE PROPOSITION

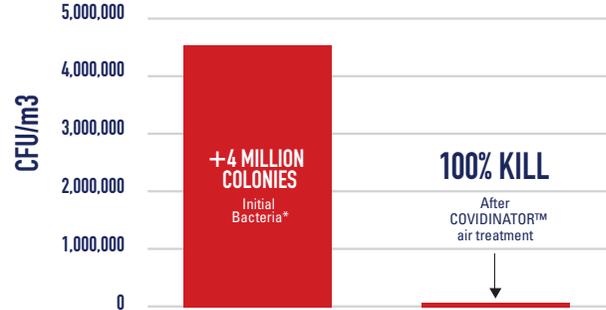

**EFFICACY:** Kills 100% of bacteria that is harder to kill than COVID-19.

**SPEED:** Runs in half the time of the current disinfection device.

**SAFETY:** The Covidinator™ does not require use of personal protective equipment (PPE).

<sup>1</sup>Staphylococcus Epidermidis is listed on the EPA's website as being more difficult to eliminate than coronaviruses.

## COVIDINATOR™ DISINFECTION (Outside Test Lab)

\*Bacteria tested is Staph. Epi., a surrogate for COVID-19

More than 4 million pathogens were eliminated from air samples by the COVIDINATOR™

## Your Safety Is Our Highest Priority

**WE BELIEVE** no man is on an island and that everyone needs someone that they can rely on to come through in a pinch. Corporate Jet Support is that company. Wherever you are and whatever your need, we will cover the 4 corners of the earth to get you what you need, when you need it.

## our history of dedicated expertise & support

1991

We started Corporate Jet Support in 1991, providing our customers with competitive prices, quality parts and remarkable service. As word of our unbeatable support spread, our business expanded throughout the tri-state area airports.

2021»

Thirty years later we hold the largest privately owned Gulfstream inventory in the world. Our burning desire to provide unmatched service is still at our core. Each day is looked at as an opportunity to improve, learn and grow to be your most trusted and knowledgeable supplier.
